

# Respondus Accessibility Conformance Report

## WCAG Edition

(Based on VPAT® Version 2.5 Rev)

**Name of Product/Version:** LockDown Browser and Respondus Monitor.

**Report Date:** April, 2026

**Product Description:** LockDown Browser is a client application installed to a user's computing device. It is based on the Chromium Embedded Framework (CEF) and renders content nearly identically to other browsers based on CEF (eg. Chrome, Edge).

Respondus Monitor is a web application that builds upon the LockDown Browser technology. When an exam requires the use of both LockDown Browser and Respondus Monitor, examinees go through a "startup sequence" that guides them through a webcam check and other requirements set by the instructor.

From an end-user's standpoint (and hence, from an accessibility standpoint), the technology for LockDown Browser and Respondus Monitor are essentially the same.
